Taito's ARKANOID BATTLE
The Classic Arcade Game goes Multiplayer

TAITO

Meet *Arkanoid Battle* – the classic ball and bricks game for up to six players simultaneously, fully powered by Deus+ technology. Arkanoid Battle will be distributed in Europe by Kaaku Limited.

It's live!

Arkanoid Battle adds a new dimension to the old "paddle-and-ball" genre. Yes, you'll find impressive Arkanoid gameplay with deep levels and a variety of bonuses and effects for hours of singleplayer fun. But *Arkanoid Battle* really shines when played against other people! That's right - it's a true *live* multiplayer game, where you have to battle other people to improve your rankings. And believe it or not, the game runs on common phones like Nokia series 40!

Battle the entire continent!

Breaking down those walls is a good way to kill time when alone. But imagine the thrill when time counts – because you're battling friends, foes, people from all over Europe... The multiplayer gameplay is simple yet effective: it's a race against the clock, as the six contestants have to get rid of their blocks as soon as possible. But it's not only about skill: you can cast bad spells over your opponents, and the strategic deployment of these is crucial to winning the game.

It's addictive!

Arkanoid Battle's multiplayer game lasts for about two minutes and provides the quick thrills mobile players need. The controls are easy to pick up, yet at the same time, championship-level brick breaking is difficult to master... The human opponents and high scores make every game meaningful... And if you want a deep singleplayer experience, *Arkanoid Battle* has the classic challenge you're looking for – plus a huge number of levels to boot.

Game Features:

- Easy to play, tough to master, impossible to put down!
- Full-fledged multiplayer capabilities: Quick online matching of available opponents
- Singleplayer game exciting in its own right
- 100 carefully designed levels with increasing difficulty!
- Human opponents and high scores make every game meaningful!
- Fully powered by Ex Machina's groundbreaking Deus+ Multiplayer Engine!

A fully working demo of Battle Arkanoid is available for most regular color-screen J2ME/GPRS phones, including Nokia Series 40 and upwards. Handset requirements are HTTP support and 64K of available memory. Kaaku Limited (http://www.kaaku.com/) is the exclusive distributor of Taito in Europe.
