

The leading global smartphone solutions provider

Business to Business

Psiloc is primarily focused on providing advanced technological solutions for a broad range of businesses. Our customers include mainly the top handset manufacturers, distributors and mobile operators worldwide, but we have also supplied software to large clients outside the GSM sector who used our applications in their day-to-day operation.

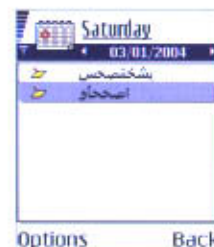

Business to Consumer

In the consumer department Psiloc offers solutions expanding the standard handset functionality and boosting its efficiency. From productivity to personalization and from content provision to entertainment our applications cover a broad spectrum of consumer needs often proving worldwide best-sellers. Working behind applications Psiloc-localized operating system opened up entirely new markets for smartphones and localization packages are offered as part of the standard bundled software.

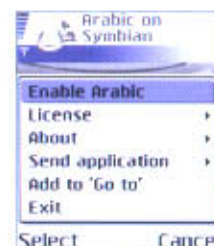

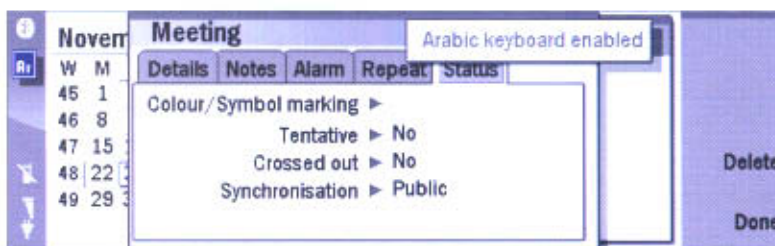

Language localizations

Arabic Localization (compatible with Series 60, 80, UIQ)

Psiloc Arabic localization enables Arabic speaking users enter any information in Arabic language in any application on devices. This is NOT only SMS module. Users can write, send and receive in Arabic: E-mails, Messages, Calendar and all other available in the device documents. He/she can also name files and system folders in Arabic.

User can enable/disable Arabic keypad by default key combinations. User can change default settings for any keys combination.

Localizations are also available on all Symbian phones in following languages:
