

Partners

Soundonweb is proud to be associated with Providers and customers such as:

Are you a mobile phone content creator ?

Would you like to distribute your content through the distribution system of Soundonweb counting more than 150 different Service Providers with approximately **5 million downloads** each month ?

Soundonweb is offering you the chance to insert your content into our database making it available to thousands of sites through our network.

Soundonweb is represented in more than **25 countries** on all continents able to commercialize your content to mobile endusers.

From this very site you are able to submit content. All proposals will be evaluated carefully and we will reply shortly on whether your content meets our specifications.

Thanks for taking contact.

Soundonweb

SOUNDONWEB AS is a **One Stop Content Provider** b2b, specialising in value-added mobile entertainment. Through our own production and products from our partners like EMI records we offer a total product-portfolio of high quality java games, ringing tones, videos, icons, logos, picture messages, dynamic SMS and MMS, Flash SMS and other audio-visual content for both SMS and MMS.

SOW products are downloaded 4,5 million times each month, and generates about € 40 mill each year.

Our mission is to keep our customers at the cutting edge with a product-portfolio focused on "killer applications". It is this commitment that has earned us the privilege to be the market leader in Scandinavia.

- + Established in 2000.
- + 20+ employees,
- + 150 Contracts with service providers all around the world,
- + Profitable,
- + Fast growing.

Service Providers cannot shoulder the content task alone, and need to co-operate with partners who are able to assist them in this process.

We are convinced that Value Added Services will become increasingly responsible for a large part of the turnover for telecom businesses, due to the development in new technology that will result in a tremendous increase in new services available.

The future earning potential for 3G players in this market no longer depends solely on the technological infrastructure, but to a larger extent on the players' ability to develop and market new Value added Services.
